| RecyclerView | ListView |
|---|---|
| • The RecyclerView's adaptor forces us to use the ViewHolder pattern. | • The ListView doesn't give that kind of protection by default. |
| • Supported Vertical Scrolling and Horizontal Scrolling | • Supported Only Vertical Scrolling |
| • Use of less memory. | • More memory is used for a long list. Sometimes devices get hanged. |
| • Animations using ItemAnimator are easy and smooth. Animations like list appearance and disappearance, adding or removing particular views, and so on. | • It's complex to use Animation and hard to handle it. |
| • Dividers between items are not shown by default. | • Dividers between items are shown by default. |
| • Use ItemDecorations to add margins and draw on or under an item View. | • ItemDecorations require customization |
| • RecyclerView is a more flexible control for handling a "list of data" | • ListView is a less flexible control for handling a "list of data" |
